## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Methanol-to-gasoline technology (MTG) uses methanol as raw material, and through a series of chemical reactions under the action of a catalyst, it is highly selectively converted into highly clean gasoline with no sulfur, no nitrogen, low benzene and low olefins. This process is a sustainable approach for producing gasoline-range hydrocarbon biofuels. It can also mitigate the challenges associated with crude oil, such as environmental pollution, scarcity and cost of fossil-derived fuels, and political instability in major crude oil-producing countries.

The global Methanol-to-Gasoline market size is projected to grow from US\$ 5243 million in 2024 to US\$ 12590 million in 2030; it is expected to grow at a CAGR of 15.7% from 2024 to 2030.
