From an environmental protection point of view, methanol, as a low-carbon, oxygen-containing fuel, has the characteristics of efficient combustion, clean emissions, and renewable energy. It is globally recognized as an ideal new clean renewable energy source. It is liquid at normal temperatures and pressures, and is safe to use and store. Convenient transportation. Compared with fuel vehicles, methanol vehicles have better emission and carbon reduction effects; compared with fuels with large price fluctuations such as natural gas, methanol prices are stable and low. At the same time, methanol fuel has a higher octane number, which can improve the compression ratio and thermal efficiency of the engine, allowing the vehicle to take into account both power and fuel economy, and has obvious operating cost advantages.

The global Methanol Vehicles market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
