Methyl cellulose (MC) is a chemical compound that is derived from cellulose, the main component of plant cell walls. MC is a white, odorless, and tasteless powder that dissolves in cold water but forms a gel in hot water. MC has many applications in various industries, such as food, pharmaceuticals, cosmetics, construction, and paper. MC is used as a thickener, stabilizer, emulsifier, binder, coating agent, and film former in these industries .

The industry trend of methyl cellulose is expected to be positive, as the global market is projected to grow at a CAGR of 4.1% from 2020 to 2025. The main factors driving the market growth are the increasing demand for MC in the food and pharmaceutical industries, the rising awareness of the health benefits of MC, and the growing adoption of MC in emerging markets. Some of the key applications of MC in the food industry include bakery products, dairy products, sauces and dressings, meat products, and beverages. MC acts as a fat replacer, texture enhancer, moisture retainer, and shelf-life extender in these products . In the pharmaceutical industry, MC is used as an excipient, a substance that helps deliver the active ingredient of a drug. MC can improve the solubility, bioavailability, stability, and release rate of drugs . Moreover, MC is also used in other industries such as cosmetics, construction, and paper for various purposes

such as skin care, cement additives, and inkjet printing .
