Abstracts

The global Methyl Propyl Ketone (MPK) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

In 2025, global Methyl Propyl Ketone (MPK) production reached approximately 1,417 tons, with an average global market price of around US\$4,039 per ton. Methyl Propyl Ketone (MPK) or 2-Pentanone is a pentanone carrying an oxo substituent at position 2. It has a role as a plant metabolite. It is a methyl ketone and a pentanone.

Global Methyl Propyl Ketone (MPK) Market Outlook

The global Methyl Propyl Ketone (MPK) market is currently undergoing a structural transformation driven by environmental regulations. As a high-performance medium-flash solvent, MPK is increasingly favored in coatings, paints, and industrial cleaning sectors. From a global supply chain perspective, the center of demand is steadily shifting from mature economies to emerging industrial hubs. Despite the pressures of raw material price volatility, its advantages in Volatile Organic Compound (VOC) compliance make it a critical alternative to traditional high-emission solvents.

On the production side, process optimization and the development of high-purity products have become mainstream. Corporate annual reports indicate that manufacturers are enhancing energy efficiency and resource recycling to meet tightening carbon emission standards. On the demand side, the stringent requirements for evaporation rates and solvency in automotive refinish, premium wood coatings, and the electronics industry have solidified MPK's market position. Currently, the Asia-Pacific region exhibits strong growth fueled by infrastructure investment and

manufacturing upgrades, while North American and European markets focus on formulation optimization to balance performance with environmental footprints.

Looking ahead, the MPK market will be profoundly influenced by global green chemistry trends. As governments strengthen monitoring of toxic air pollutants, solvents with lower environmental toxicity will receive greater policy support. Furthermore, sustainability reports from multinational chemical companies highlight that advancements in solvent recovery technologies and the potential for bio-based feedstocks will revitalize the MPK value chain. Overall, the market is poised for steady growth with an increasing emphasis on the environmental performance of product lifecycles.
