The global Methyl Sulfone market size is predicted to grow from US\$ 916 million in 2025 to US\$ 1366 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

Methyl Sulfone is an organosulfur compound with the chemical formula $(CH_3)_2SO$, appearing as a white crystalline solid with high thermal stability, low toxicity, and excellent solubility in water. It is widely used in dietary supplements, pharmaceuticals, personal care products, veterinary products, food additives, and specialty chemical synthesis due to its sulfur content and biological compatibility. The supply chain begins with upstream raw materials such as methanol, dimethyl sulfide (DMS), hydrogen peroxide, oxygen, and sulfur-containing intermediates. Industrial production typically involves the oxidation of dimethyl sulfoxide (DMSO) or dimethyl sulfide to produce high-purity methyl sulfone. Midstream activities include purification, crystallization, drying, particle-size control, and formulation into pharmaceutical-grade, food-grade, cosmetic-grade, or industrial-grade products. Downstream users include nutraceutical manufacturers, pharmaceutical companies, cosmetics and personal care producers, animal nutrition suppliers, chemical reagent manufacturers, and specialty materials companies, where methyl sulfone serves as an active ingredient, sulfur supplement, reaction intermediate, or functional additive. In 2025, global Methyl Sulfone output was about 400,000 tons with 500,000 tons of capacity, average prices of USD 2,000-5,000 per ton, and gross margins around 28%.

United States market for Methyl Sulfone is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
