The global Methylamine Compounds market size is predicted to grow from US\$ 1768 million in 2025 to US\$ 2441 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Methylamine compounds refer to a class of organic amine chemicals formed by the substitution of hydrogen in ammonia molecules with methyl groups, mainly including monomethylamine, dimethylamine, trimethylamine and their anhydrous forms and aqueous solution products. These types of compounds are usually produced through amination reactions between methanol and ammonia under the action of catalysts. They are important basic organic amine raw materials and are widely used in pesticide intermediates, pharmaceutical intermediates, rubber auxiliaries, surfactants, solvents, electronic chemicals, and fine chemicals. They play an important role in the chemical industry chain. In 2025, global Methylamines production reached approximately 3,935 K MT, with an average global market price of around US\$ 459 per ton.

The annual production capacity of methylamine compounds is 5000 K MT, with a gross profit margin of about 20%.

Upstream: The main raw materials are methanol and ammonia.

Downstream: mainly used in pesticide intermediates, pharmaceutical intermediates, rubber additives, surfactants, dyes, electronic chemicals, and fine chemical industries, with high demand in the pesticide and surfactant fields.

Raw material costs account for approximately 60% to 70%, energy and utility costs account for approximately 10% to 15%, manufacturing and equipment depreciation

costs account for approximately 8% to 12%, and packaging and logistics costs account for approximately 5% to 8%.

United States market for Methylamine Compounds is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
