## Abstracts

The global Methylfluorosilicone Oil market size is predicted to grow from US\$ 150 million in 2025 to US\$ 222 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2025, the global production of methylfluorosilicone oil was approximately 3,650 tons, with an average selling price of about US\$42 per kilogram. The scale of single-line production capacity varies depending on the production process and investment scale, with an average gross profit margin of approximately 20-30%. Methylfluorosilicone oil is a fluorine-containing specialty silicone oil, polymerized from trifluoropropylmethylsiloxane monomers. It possesses excellent oil resistance, solvent resistance, high-temperature resistance, low surface tension, and hydrophobicity, and is widely used as an antifoaming agent, lubricant, sealant, textile finishing agent, and high-temperature insulation material. It has important applications in the petrochemical, textile, and electronics industries.

The upstream core raw materials of methylfluorosilicone oil mainly include the intersection products of fluorine chemistry and silicon chemistry, such as trifluoropropylene, methylchlorosilane, and the key intermediate trifluoropropylmethylcyclotrisiloxane obtained from their reaction. Its downstream applications are highly concentrated in high-end industries with extreme requirements for resistance to various media and high and low temperatures, mainly including aerospace, electronics, specialty chemicals, and high-end textiles.

United States market for Methylfluorosilicone Oil is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
