## Abstracts

The global MHC Alloy market size is predicted to grow from US\$ 346 million in 2025 to US\$ 496 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Global sales of MHC Alloy was about 1360 tons in 2025 with average price of 260 USD/kg. The average gross margin of the industry is between 15%-20%. MHC Alloy belongs to the molybdenum alloy family and price fluctuations of molybdenum metal will impact the market directly.

MHC Alloy, short for molybdenum–hafnium–carbon alloy, is a particle-strengthened molybdenum-based refractory alloy in which a small addition of hafnium (Hf) and carbon (C) forms finely dispersed hafnium carbide (HfC) precipitates within the molybdenum (Mo) matrix. This dispersion strengthening significantly improves high-temperature strength, creep resistance, and recrystallization resistance compared with unalloyed molybdenum, while retaining molybdenum's high melting point, thermal conductivity, and high-temperature stability. MHC alloys are typically produced by powder metallurgy and supplied as bars, rods, plates, or other semifinished forms for hot-working tooling (e.g., high-temperature dies), high-temperature structural components, and other demanding applications where dimensional stability and strength at elevated temperatures are critical.

United States market for MHC Alloy is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for MHC Alloy is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for MHC Alloy is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key MHC Alloy players cover Elmet Technologies, Plansee SE, Molytun, ATTL Advanced Materials, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
