Abstracts

The global Micellar Casein Concentrate (MCC) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Manufacture of micellar casein concentrates (MCC) and microfiltered milk protein concentrate (MMPC) from milk by microfiltration produces a range of compositions, depending on the amount of milk-derived whey protein removed. Further concentration and diafiltration can increase the total protein and decrease the amount of lactose in the final ingredient. Unlike milk protein concentrates and isolates, the microfiltration process will alter the casein-to-whey-protein ratio compared to that found in milk. MCC or MMPC cannot be produced by combining separately produced casein (caseinate) and whey proteins.

The global Micellar Casein Concentrate (MCC) market involves the supply and demand for a concentrated form of micellar casein, a slow-digesting protein derived from milk. The market is driven by factors such as the demand for protein-rich products, growing awareness about protein's health benefits, and sports nutrition trends. Key players aim to provide high-quality products while addressing sustainability and consumer preferences. Geographical variations exist due to regional dietary habits and market development. Ongoing research and sustainable practices can further shape the market's growth and competitiveness.
