The global Michelson Interferometer-Based Meter market size is predicted to grow from US\$ 33.35 million in 2025 to US\$ 50.13 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

The scanning wavemeter is based Michelson interferometer. A Michelson interferometer-based wavemeter is an often used type of wavemeter. When testing an optical source, light is sent into the Michelson interferometer, while the length of one of interferometer arms is scanned through a certain range. The output power period is logged by the photodetector against changes in arm length. This reflects the wavelength.

Technological innovations have an important role in driving the growth of the market. To sustain in the competitive market, vendors should develop new ideas and technologies and stay up to date with the advanced technologies.

For a long time, wavemeters have been monopolized by foreign companies such as Keysight and Bristol in the United States, Yokogawa in Japan, and HiFinesse in Germany.

Compared with developed international regions such as Europe, America and Japan, there are opportunities for large-scale and rapid market development in the emerging Asia-Pacific and Latin American regions. In particular, China has self-produced wavemeter products, and the downstream demand for wavemeters will grow faster.
