The global Micro Annular Gear Pump market size is predicted to grow from US$ 194 million in 2025 to US$ 236 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

Gear pumps use the actions of rotating cogs or gears to transfer liquids. A micro annular gear pump is a type of positive displacement (PD) pump. It is also called gerotors or trochoid pumps. A micro annular gear pump is a type of internal gear pump. The inner and outer gears are assembled eccentrically within the pump casing without a spacer. Generally, the number of teeth on the driven inner gear is one less than that of the idling outer gear. Since the number of teeth and the centre for each gear are different, the volume of the gap between the inner and the outer rotors changes throughout a cycle. The pump inlet is positioned where the gap begins to widen and this generates suction. The pump outlet is positioned on the opposite side of the casing where the gap between the gears closes.

Micro annular pumps are used for the continuous delivery and discrete dosage of water, watery solutions, solvents, methanol, oil, lubricants, adhesives, inks and paints as well as other high viscosity liquids.

The Micro Annular Gear Pump, as an efficient and compact microfluidic transport device, has gained increasing attention in recent years within industries such as industrial and medical fields. With the continuous development of microfluidic technology, the demand for precise manipulation of minute fluid volumes has grown, highlighting the significant potential of the Micro Annular Gear Pump in applications like

microfluidic transport, drug delivery, and biochemical analysis. Its distinctive annular gear structure equips the pump with high pressure stability and flow control capabilities, better meeting the requirements for stability and precision in microfluidic systems. Furthermore, the Micro Annular Gear Pump offers advantages such as small footprint, rapid response, and low energy consumption, aligning well with the growing trends towards intelligence and portability.
