Micro aspherical glass lens is a type of lens made from glass that has a non-spherical surface. Unlike traditional spherical lenses, which have a uniform curvature across their entire surface, aspherical lenses have a more complex shape that varies across their surface. This allows them to correct for aberrations that can occur with spherical lenses, resulting in sharper, clearer images. Micro aspherical lenses are used in a wide range of applications, including digital cameras, smartphones, medical instruments, and optical communication devices.
