The global Micro Blade Fuse market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Micro blade fuse is a safety device used to protect electrical systems from damage due to overcurrent. They usually consist of a sheet-shaped conductor connected by two terminals, one of which is connected to the positive terminal of the electrical system and the other to the load device. When an overload occurs in a circuit, the fuse inside the conductor melts, cutting off the current to protect the circuit and equipment from damage. Micro blade fuse is more compact than traditional glass tube fuses and is suitable for applications with limited space, such as electrical systems in automobiles, ships and electronic equipment.

United States market for Micro Blade Fuse is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
