Combined heat power generation is the generation of heat and electricity simultaneously. This is done through burning fuels such as natural gas, oils and biomass. Micro combined heat power generation is the scaled down version of CHP methods.

The benefits of micro CHP systems include the easy and efficient product of heat and electricity. Moreover electricity can be generated as the by product of heat generation. Utilization of waste resources and saving of carbon acts as the driving force of this industry.

The limiting factor of this industry are rising energy prices and stringent rules imposed by the government in the production of CHP systems. The opportunity lies in the manufacturing of the systems which contribute to the saving of fuel in a better way. Over the next five years, LPI(LP Information) projects that Micro Combined Heat & Power will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
