## Abstracts

The global Micro Direct Drive Motor market size is predicted to grow from US\$ 2742 million in 2025 to US\$ 3962 million in 2031; it is expected to grow at a CAGR of 6.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The working principle of the direct-drive motor directly involves the motor rotor driving the load to achieve efficient transmission and control. Its core structure mainly includes three components: stator, rotor and sensor (encoder). The stator is equipped with coils and iron cores, which are responsible for generating a rotating magnetic field and providing a rotating torque for the rotor. The rotor is assembled on the motor shaft by magnets and copper coils. When the stator coil is energized to excite the rotating magnetic field, the magnet rotates under the action of magnetic force. What is particularly critical is that the rotor is directly connected to the load, so its rotation can directly drive the load to rotate, realizing a direct drive mechanism without intermediate links.

A micro direct-drive motor is a motor that directly converts electrical energy into mechanical energy and improves efficiency and precision by reducing intermediate transmission links (such as gears, belts, etc.).

The micro direct-drive motors in this article are mainly motors with an OD diameter of 100 mm or less.

Micro direct-drive motor technology is relatively mature and widely used in various industries. For example, robots, medical equipment, semiconductor equipment and other high-end fields. These fields have strict requirements on the accuracy, stability and reliability of motors, and micro direct-drive motors, with their excellent performance, accurately meet these high-standard requirements.

In terms of market competition, global micro direct-drive motor companies are mainly distributed in Japan, Europe, the United States, China and other countries. The top core companies mainly include Yaskawa, Bosch Rexroth, Parker, CKD, NSK, Mitsubishi Electric Corporation, Rockwell Automation, Kollmorgen, etc. The top 10 companies have a share of nearly 35%. The market is relatively fragmented, but high-end application motors are still mainly concentrated in the hands of leading companies such as Yaskawa Electric, Seiko, and Bosch. For example, in the field of machine tools, the main function of micro direct-drive motors is to improve processing accuracy and speed, so that machine tools can reduce errors and improve processing quality during processing; in the field of semiconductor wafer transfer robots, micro direct-drive motors have the characteristics of high precision and high response speed, which can meet these requirements of wafer handling robots. In the field of robotics, it is mainly used in mechanical arms to control the arm spindle, and can also perform reaction force detection and feedback.
