Micro drill bits are very thin drill bits. They are mainly used for fine processing of electronic parts, medical devices, jewelry, etc. Since extremely high precision is required, they are made of materials with high hardness and resistance to wear such as cemented carbide.

Micro drill bits also require very careful handling to avoid breaking or chipping of the cutting edge, since the cutting force is weak due to its very thin and sharp cutting edge. Appropriate machining conditions and coolant usage should be selected depending on the material used.

The global Micro Drill Bit market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
