Micro Electronic Fuses incorporate various high-performance, high-precision protective functions that are not feasible with conventional fuses. Compared with the function realized using discrete passive components or a combination of multiple ICs, this feature contributes to higher quality, lower cost by reducing the number of components, and miniaturization by reducing the mounting area. This product is also effective in reducing maintenance costs and recovery time required for repair because it can be used repeatedly.

The global Micro Electronic Fuse market size is projected to grow from US\$ 104 million in 2024 to US\$ 152 million in 2030; it is expected to grow at a CAGR of 6.5% from 2024 to 2030.
