Micro-LED, also known as microLED, mLED or μ LED, is an emerging flat panel display technology. Micro-LED displays consist of arrays of microscopic LEDs forming the individual pixel elements. When compared to the widespread LCD technology, Micro-LED displays offer better contrast, response times, and energy efficiency.

Along with OLEDs, Micro-LED are primarily aimed at small, low-energy devices such as smartwatches and smartphones. OLED and Micro-LED both offer greatly reduced energy requirements compared to conventional LCD systems. Unlike OLED, Micro-LED is based on conventional GaN LED technology, which offers far higher total brightness than OLED produces, as much as 30 times, as well as higher efficiency in terms of lux/W.
