The Micro Mesh Nebulizer atomizes the drug solution into tiny particles through high-frequency vibration or compressed gas, making it easier for the drug to enter the patient's respiratory tract and directly act on the lesion to achieve a therapeutic effect. Compared with traditional oral drugs, administration through inhalation can improve the bioavailability of the drug, reduce the dosage, reduce the impact of the drug on other organs, and at the same time, it can exert its effect faster.

The global Micro Mesh Nebulizer market size is projected to grow from US\$ 383 million in 2024 to US\$ 722 million in 2030; it is expected to grow at a CAGR of 11.2% from 2024 to 2030.
