The global Micro Nano Bubble Generator market size is predicted to grow from US\$ 207 million in 2025 to US\$ 336 million in 2031; it is expected to grow at a CAGR of 8.4% from 2025 to 2031.

A Micro Nano Bubble Generator or as it should be called according the ISO standards, an ultrafine bubble generator is a device that mixes water and a gas and produces nanobubbles. Nanobubbles should be smaller than 200 nano meter to be called a nanobubble. Since 200 nano meters is quite large to be called nanoscopic the name nanobubbles is not completely appropriate. For this reason, the ISO has named a nanobubble and ultrafine bubble. The naming convention follows the same names as for particles. Micro nanobubble and Nanobubble generators utilize pressurized dissolution, electrolysis or by swirling fluids in a mixing chamber and then feeding the fluids through a single shear point, injector, or venturi to produce air bubbles having a mean particle size of >200 nm. The majority of these systems require an external air supply and more importantly they do little to enhance the electrochemical properties of water.

United States market for Micro Nano Bubble Generator is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
