Micro OLED for XR is a micro-display solution that deeply integrates semiconductor manufacturing processes with organic light-emitting display technology. It uses a single-crystal silicon wafer as the driving backplane, and utilizes mature CMOS technology to directly integrate pixel arrays and driving circuits on the silicon substrate, fabricating the OLED light-emitting layer on top, thus achieving monolithic integration of the display screen and the driving chip. In XR applications, Micro OLED needs to be adapted to different optical schemes: 3000-8000 nits of brightness is required for the Pancake scheme, over 10,000 nits for Birdbath, and over 20,000 nits for array waveguides.

In 2025, global Micro OLED for XR sales reached approximately 5,180 K Units, with an average global market price of around 216 US\$/Unit. Production capacity reached 8,000 K Units, with a gross profit margin of approximately 46%.
