## Abstracts

The global Micro Prisms for Consumer Electronics market size is predicted to grow from US\$ 135 million in 2025 to US\$ 249 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

Micro prisms used in consumer electronics refer to tiny prism elements or micro prism arrays used in smartphone camera periscope folding optical paths, micro projection and imaging modules, ToF and structured light sensing modules, etc., to achieve functions such as beam bending, deflection, splitting, shaping and coupling. Typical forms include glass micro prisms and prism arrays, as well as folding prisms with high reflectivity or anti reflection coatings. The core requirements are angle consistency at small sizes, deflection angle error control, low stray light, and coating reliability. In 2025, global Micro Prisms for Consumer Electronics production reached approximately 96.97 M Units, with an average global market price of around US\$ 1.42 per unit.

The annual production capacity of microprisms for consumer electronics is 150 M units, with a gross profit margin of around 20%.

The upstream mainly includes optical glass and precision molded glass blanks or preforms, polishing and grinding consumables and diamond tools, coating targets and process gases, cleaning chemicals, optical adhesives and structural adhesives, as well as precision machining and coating and testing equipment.

The midstream includes microprism design and tolerance definition, forming processing such as precision grinding and polishing or glass molding and precision replication, coating, cleaning, full inspection and sorting, and reliability verification, as well as fitting and assembly with the lens barrel or bracket.

The downstream mainly enters the mobile phone camera module factory, lens factory, and whole machine OEM chain, as well as some AR micro display optical and sensing module factories.

In terms of cost structure, glass microprisms typically consist of about 10% to 20% raw materials and front-end blanks, about 30% to 50% processing and yield losses, about 12% to 22% coating and cleaning, about 10% to 18% inspection, sorting, and measurement, and about 6% to 12% bonding, assembly, and packaging logistics.

The market view of microprisms for consumer electronics can be summarized as a steady increase in demand but a concentration of value towards high precision and systematic capabilities. On the one hand, imaging continues to be the core selling point of smartphone differentiation. The periscope telephoto lens is sinking from flagship to secondary flagship and multi camera fusion is strengthened, which keeps the demand for microprisms in folding optical paths growing, and the requirements for angle consistency, deflection error, stray light suppression, and coating reliability continue to increase, driving the value of a single lens to move upward; On the other hand, industry competition is not just about production capacity competition, but also about yield and consistency competition. Microprism is more prone to problems such as edge breakage, surface shape, coating pinholes, and bonding eccentricity under the trend of miniaturization. The key to determining whether suppliers can enter the head module chain lies in the ability of automated measurement and full inspection, process window control, and joint definition of tolerances with module factories; At the same time, the annual price decline still exists, and mature models will exert downward pressure on unit prices. Therefore, in order for enterprises to obtain sustained profits, they need to rely on the introduction of high-end models, product portfolio upgrades such as array and integrated components, and platformization of coating, bonding, and reliability verification to offset the price reduction; Overall, the growth potential of microprisms for consumer electronics comes from increasing penetration rates and upgrading high-end specifications, but industry profits are more inclined towards top and precision suppliers with high-precision manufacturing, full inspection and measurement, integrated coating and bonding, and global customer certification capabilities.
