The global Micro Water Spraying Fertilizer Integrated Machine market size is predicted to grow from US\$ 403 million in 2025 to US\$ 688 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

The Micro Water Spraying Fertilizer Integrated Machine is a modern agricultural device that highly integrates irrigation and fertilization. It integrates water-soluble fertilizers into the irrigation water flow and then sprays them evenly to the crop roots through micro-nozzles, achieving simultaneous and precise water and fertilizer supply. It consists of a water filtration system, a fertilizer applicator, a water supply network, micro-sprinklers and a control system, etc. It has the advantages of saving water and fertilizer, saving labor and effort, and improving crop yield and quality. It is an important facility for realizing efficient and precise agriculture.

In 2025, the global production of Micro Water Spraying Fertilizer Integrated Machines reached 26,000 units, with an average gross profit margin of 32%.

Currently, the market is upgrading from 'single-unit fertilizer injection equipment' to 'integrated hardware and software precision irrigation systems.' North America and Europe are primarily focused on mature replacements and high-end upgrades, while China, India, Southeast Asia, the Middle East, and Latin America are experiencing accelerated penetration driven by the popularization of water-saving irrigation, the expansion of facility agriculture, and policy support.

Looking ahead, firstly, hardware standardization and software platformization will occur. Upstream metering pumps, valve assemblies, and sensors will become increasingly modular, while midstream brand owners will differentiate themselves through

algorithms, crop models, and SaaS platforms. Secondly, product structures will become polarized. One end will be mid-range modular models for field and orchard applications, emphasizing cost-effectiveness and ease of maintenance; the other end will be high-end multi-channel closed-loop control systems for greenhouses, blueberries, strawberries, tomatoes, and hydroponics, emphasizing EC/pH accuracy, formula management, and integration with environmental control systems.
