Micro Wind Turbines are small-scale wind power generation systems designed to convert wind energy into electricity for localized or distributed power applications. Typically with a power capacity of less than 10 kW, these turbines are used for residential buildings, remote facilities, telecommunications stations, farms, and small off-grid energy systems. Micro wind turbines usually feature compact rotor designs, simple installation, and low maintenance requirements, allowing them to provide supplementary renewable energy or independent power supply in areas with suitable wind resources. In 2025, global Micro Wind Turbines production reached approximately 83.5 k unit, with an average global market price of around 3500 USD/unit. The production capacity for Micro Wind Turbines in 2025 was approximately 90 k units. The typical gross profit margin for Micro Wind Turbines between 20% and 40%.
