The global Microalgae Fertilizers market size is predicted to grow from US\$ 14710 million in 2025 to US\$ 29530 million in 2032; it is expected to grow at a CAGR of 10.7% from 2026 to 2032.

Organic fertilizers made from different kinds of microalgae are known as microalgae fertilizers. The microalgae fertilizers market offers solutions in the form of products that are abundant in micronutrients like iron, zinc, and manganese, as well as essential nutrients like potassium, phosphorus, and nitrogen. They are made by growing and processing biomass from microalgae, which is subsequently combined to create liquid or solid fertilizer solutions.

One of the primary drivers is the growing awareness among farmers and agricultural stakeholders regarding the environmental and economic benefits of microalgae-based fertilizers. For instance, studies have shown that using microalgae-based fertilizers can reduce the carbon footprint of agricultural practices by up to 20%. Microalgae offer a renewable and sustainable source of nutrients, including nitrogen, phosphorus, and potassium, essential for plant growth. Unlike conventional chemical fertilizers, microalgae-based fertilizers are biodegradable, non-toxic, and environmentally friendly, making them attractive options for environmentally conscious consumers and agricultural producers.
