Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Microarray Analysis market.

A microarray is a multiplex lab-on-a-chip. It is a 2D array on a solid substrate (usually a glass slide or silicon thin-film cell) that assays large amounts of biological material using high-throughput screeningminiaturized, multiplexed and parallel processing and detection methods. The concept and methodology of microarrays was first introduced and illustrated in antibody microarrays by Tse Wen Chang in 1983 in a scientific publication and a series of patents.

Types of microarrays include DNA microarrays, MMChips (for surveillance of microRNA populations), Protein microarrays, Peptide microarrays (for detailed analyses or optimization of protein–protein interactions) and Tissue microarrays, etc.
