The global Microarray-based Non-Invasive Prenatal Testing market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

For expectant mothers, microarray-based non-invasive prenatal testing (NIPT) provides a secure and educational screening choice. To determine the likelihood of chromosomal abnormalities in the foetus, it examines cell-free foetal DNA that is circulating in the mother's blood. In contrast to conventional techniques that may result in miscarriage, NIPT is a blood test. With a detection rate for Down syndrome that is above 99%, this extremely reliable test yields findings in less than a week. In comparison to earlier techniques, it can even test for a wider spectrum of disorders. However, NIPT is only a screening tool and not a conclusive diagnosis. It could require more testing to be confirmed. It might not be appropriate for all pregnancies, and the cost and insurance coverage can differ.
