The global Microbial API market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Microbial APIs (Application Programming Interfaces) refer to software interfaces that allow developers to interact with microbial data and perform various operations using that data. APIs can provide access to a range of microbial data, such as genomic data, microbiome data, and other types of microbiological data.

Microbial APIs can be used for a variety of purposes, including research, drug discovery, diagnostics, and more. For example, researchers can use microbial APIs to analyze microbial genomic data to better understand the role of specific genes in microbial function or to identify potential drug targets. Similarly, pharmaceutical companies can use microbial APIs to screen potential drug candidates against a database of microbial genomes to identify compounds with antimicrobial properties.

There are several microbial APIs available, including NCBI's Entrez API, KEGG API, and IMG API, among others. These APIs provide access to a wealth of microbial data and can be used in a variety of programming languages, making it easy for developers to integrate microbial data into their applications.

United States market for Microbial API is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Microbial API is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
