## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The microbial limit test manifold is simple in structure and easy to disassemble. Consists of a complete bioburden filtration system consisting of manifolds, pumps, funnels and membrane filters. Bioburden tests are performed on filterable products to determine the number of viable and regenerable microorganisms. By recovering the organisms on and in the membrane filter, the sample processing efficiency and microbial quality can be assessed to ensure that the product is not harmful to the intended recipient.
