Microbial protein feed refers to high-protein biomass derived from microorganisms such as yeast, bacteria, actinomycetes, or algae, cultivated through controlled fermentation processes. After harvesting and drying, the resulting product is used as a protein-rich animal feed ingredient. With a well-balanced amino acid profile and high digestibility, microbial protein serves as an alternative to traditional protein sources like fishmeal and soybean meal. It is widely applied in livestock, aquaculture, and pet feed, offering benefits such as rapid production, low resource consumption, and reduced environmental impact, making it a sustainable solution in modern animal nutrition.

United States market for Microbial Protein Feed is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Microbial Protein Feed is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Microbial Protein Feed is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
