The global Microbial Rapid Detection System market size is predicted to grow from US$ 3327 million in 2025 to US$ 8909 million in 2031; it is expected to grow at a CAGR of 17.8% from 2025 to 2031.

The rapid detection system for microorganisms is a device used to quickly detect and identify the existence, type and quantity of microorganisms (such as bacteria, fungi, viruses, etc.). Such systems play an important role in areas such as food safety, medical diagnosis, and environmental monitoring. Traditional microbial detection methods usually take a long time, and it takes several days or even longer to get the results, while the microbial rapid detection system can quickly provide accurate detection results in a short period of time. As technology advances, the accuracy of microbial rapid detection systems continues to improve. Highly accurate test results help early detection and control of microbial contamination, avoiding cross-infection of food and medicine.
