The global Microcapsule Composite Coated Fasteners market size is predicted to grow from US\$ 859 million in 2025 to US\$ 1528 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

Microcapsule Composite Coated Fasteners are used to solve vibration loosening problems on Bolts, nuts and other threaded fasteners, as well as leakage problems by applying sealants under the head of Screws and Bolts, replacing “O Rings” and/or gaskets and rubber washer.

The pre-applied threadlocker of Microcapsule Composite Coated Fasteners remains inactive until the coated fastener is assembled onto the mating part. During the assembly the micro capsules are ruptured, initiating the polymerization process, curing the assembly quickly at room temperature, providing reliable locking and immediate sealing properties to the assembly.

Compared to the overall market, the market for Microcapsule Composite Coated Fasteners is still small, mainly due to the high cost of microencapsulated relative to the cost of ordinary fasteners.

However, Microcapsule Composite Coated Fasteners can effectively reduce the loosening of fasteners due to vibration and reaction forces, and then can effectively improve product life and maintenance cycles. Based on the above advantages, Microcapsule Composite Coated Fasteners will have more and more applications in the future.

The Microcapsule Composite Coated Fasteners Market is growing steadily, driven by

advancements in adhesive technology and increasing demand for reliable fastening solutions across industries. Key trends include:

Increased Adoption in Automotive and Aerospace: These fasteners are widely used in automotive and aerospace industries for their vibration-resistant properties, helping to improve safety and durability in high-performance applications.

Growth in Renewable Energy Sector: The rise of wind turbines and solar installations has increased the need for secure and low-maintenance fasteners, boosting the demand for microencapsulated fasteners.

Focus on Lightweight Materials: Industries are shifting toward lightweight materials such as aluminum and composites, where microencapsulated fasteners are preferred for their ability to form strong, reliable bonds without additional adhesives.
