The global Microchannel Plates (MCP) market size is predicted to grow from US\$ 312 million in 2025 to US\$ 736 million in 2032; it is expected to grow at a CAGR of 13.3% from 2026 to 2032.

Microchannel Plates (MCP) are sophisticated devices used to detect and amplify electrons and ions in various scientific and technological applications. Comprising a thin plate with numerous microscopic channels, MCPs function by multiplying incoming particles through a cascade effect within these channels. When a particle enters a channel, it strikes the channel wall, releasing secondary electrons that continue to cascade, resulting in a significant amplification of the original signal. MCPs are utilized in fields such as astrophysics, medical imaging, mass spectrometry, and night vision technology due to their high sensitivity, fast response time, and ability to detect low levels of radiation. Their precision and efficiency make them invaluable in both research and practical applications requiring particle detection and amplification.
