The global Microchip Electrophoresis System market size is predicted to grow from US\$ 212 million in 2025 to US\$ 333 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global microchip electrophoresis system production reached approximately 43 k units, the average price is 5000 usd/unit. The microchip electrophoresis system is used to analyze the size of DNA/RNA samples and has convenient analysis operability. Its analytical cost is comparable to agarose gel electrophoresis, and it can perform fully automated analysis of up to 108 samples. The system achieves high resolution and high sensitivity. It can significantly improve workflows for mutation checking and genotyping in genome editing.

Market Concentration and Key Players:

Internationally, the market concentration of microchip electrophoresis system is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Shimadzu and Bio-Rad Laboratories and other large manufacturers; from the domestic point of view, microchip electrophoresis system still has a lot of room for development.

Manufacturing Processes and Market Trends:

The core of the fabrication process of microchip electrophoresis system lies in the precision machining and function integration of microfluidic chips. Its basic materials have gradually changed from early silicon and glass to polymer polymers such as polydimethylsiloxane (PDMS), and micro-scale channels have been etched by

photolithography, soft lithography or circuit board mold methods. In recent years, innovative technologies such as low voltage drive array electrode design and embedded optical fiber detection have further reduced system power consumption and improved integration. For proteins, Nucleic acid and other biomolecules are easy to adsorb. The use of anti-adsorption materials such as polyethylene glycol (PEG) substrate effectively improves the reproducibility and stability of separation.

In terms of market trends, the global microfluidic product market continues to expand, and the strong growth momentum stems from the rapid development of in vitro diagnostic field, especially POCT demand. The growth of China market benefits from the state's policy support in precision medicine and bioeconomy and the increase of scientific research investment. The application scenario has extended from Basic scientific research to clinical diagnosis, drug research and development, food safety monitoring and other aspects. The product form presents a trend of high throughput, automation, The clear trend of portable and intelligent development, while the improvement of domestic enterprises 'technical strength is accelerating the import substitution process and playing an increasingly important role in the global market.
