Microchip electrophoresis (MCE) is a kind of capillary electrophoresis that has been miniaturized. Electrophoresis is a method for separating macromolecules like nucleic acids (DNA, RNA) and proteins. In most laboratories across the world, this procedure has become a standard method for fragmenting DNA and sorting protein combinations. Higher voltages are used in MCE to enable quicker and more efficient electrophoretic separations.

Microchip electrophoresis is a high-performance separation technology that enables complicated materials to be separated quickly for analysis. Microchip electrophoresis has a high peak capacity and a high resolution.
