Microcomputer Rice Cookers are intelligent cooking appliances based on microprocessor control and thermodynamic principles, integrating temperature sensors, pressure sensors, and multi-stage heating modules to dynamically adjust and closed-loop control cooking parameters (e.g., temperature, time, pressure). Key functions include preset cooking modes (e.g., precise cooking, quick cooking, congee/soup), intelligent heat curve optimization, anti-overflow protection, and automatic warming. Advanced models may incorporate IoT modules for remote operation or recipe data exchange. These cookers feature sealed inner pots, non-stick coatings, and energy optimization algorithms to enhance thermal efficiency and cooking consistency, enabling automated processing of grain-based ingredients (e.g., rice, cereals) in household or catering settings and facilitating the transition of traditional culinary practices toward precision and convenience.

Typical products include: Haier's FBS-F4091C, etc.
