Microcrystalline wax, any petroleum-derived plastic material that differs from paraffin waxes in having much finer and less-distinct crystals and higher melting point and viscosity. Microcrystalline waxes may be made from the residue of crude petroleum by refining; or they may be made from petroleum jelly by removing the oil with a solvent. Their physical properties may be controlled by the temperature of the solvents. Methods of separation include solvent dilution, chilling, centrifuging, filtering, and various combinations of these.

Global Microcrystalline Wax main manufacturers include Sasol, Sonneborn, The International Group (IGI) and Sinopec Nanyang Energy Chemical, totally accounting for 20% of the market. Asia Pacific is the largest market, with a share about 30%. As for the types of products, it can be divided into laminating grade, coating grade, hardening grade and others. The most common type is laminating grade, with a share over 58%. As

for the types of application, it is widely used in packaging, tire and rubber, cosmetics and personal care, adhesives and others. The most common application is packing, with a share over 32%.
