The substrate glass is an important part of the display module. The display module can be understood as a 'sandwich' structure - a liquid crystal sandwiched between two glass substrates. The quality of the substrate glass depends on the resolution, transmittance, thickness, weight, visual angle and other properties of the display module, so the substrate glass is very important for the component materials of the display module. Microelectronics are miniature circuits formed on solid (mainly semiconductor) materials. This paper mainly studies the microelectronics substrate glass .
