Microencapsulation Service refers to a professional technical service that involves enclosing tiny particles of active ingredients (such as drugs, food additives, cosmetics ingredients, or industrial materials) within a thin, protective shell (capsule) to control the release, improve stability, mask odors or tastes, and enhance the handling and application properties of the core materials, widely applied in multiple industries through standardized or customized technical processes.

Demand for Microencapsulation Service is growing steadily, driven by the increasing need for improved product performance, extended shelf life, targeted delivery of active ingredients, and compliance with industry safety standards across pharmaceuticals, food, cosmetics, and industrial sectors; businesses and manufacturers are increasingly adopting microencapsulation to enhance product competitiveness, reduce costs, and meet consumer demand for high-quality, functional products, creating substantial business opportunities in customized service packages, technical optimization, scale production, and cross-industry solution integration, with long-term growth supported by advancements in material science and industrial manufacturing technology.
