Microfiber Lens Wipes are a disposable lens cleaning product using microfiber non-woven fabric as the substrate, pre-moistened with a gentle, non-abrasive cleaning solution. The microfibers, typically with diameters at the micron level, provide high absorbency, strong dirt removal capability, and scratch-free performance on coated surfaces. These wipes effectively remove fingerprints, grease, dust, and stains from optical surfaces including eyeglass lenses, camera lenses, phone screens, computer monitors, and automotive display systems. They are safe for lenses with anti-reflective and blue-light-blocking coatings without causing damage. In 2025, global sales of Microfiber Lens Wipes reached approximately 8.8 billion units, with an average price of around USD 0.03 per unit. Single production line capacity typically ranges from 80 to 120 million units per year, with industry gross margins generally ranging from 20% to 25%.
