The global Microfluidic Solenoid Valves market size is predicted to grow from US\$ 151 million in 2025 to US\$ 222 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

A Solenoid Valve is an electromechanically operated valve. Solenoid Valve is used to control the fluid automatic based components, belonging to the actuator; the valve is controlled by an electric current through a solenoid: in the case of a two-port valve the flow is switched on or off; in the case of a three-port valve, the outflow is switched between the two outlet ports. Multiple Solenoid Valves can be placed together on a manifold. Solenoid Valves are the most frequently used control elements in fluidics. Their tasks are to shut off, release, dose, distribute or mix fluids. They are found in many application areas. Solenoids offer fast and safe switching, high reliability, long service life, good medium compatibility of the materials used, low control power and compact design.
