Microfluidics deals with the behaviour, precise control and manipulation of fluids that are geometrically constrained to a small, typically sub-millimeter, scale at which capillary penetration governs mass transport. It is a multidisciplinary field at the intersection of engineering, physics, chemistry, biochemistry, nanotechnology, and biotechnology, with practical applications in the design of systems in which low volumes of fluids are processed to achieve multiplexing, automation, and high-throughput screening. Microfluidics Components refer to the devices you'll need when working with microfluidic. Including microfluidic chips, pumps, sensors, valves, connectors and all other accessories you may need to build your own microfluidic system, or simply improve your current one.
