Microgreens seeds are the tiny, immature versions of vegetables and herbs that are harvested when they are just a few inches tall, typically within 7-21 days after germination. These seeds can be from a variety of plants such as kale, arugula, radish, basil, and many others. They are grown densely packed in soil or a growing medium and are usually harvested when they have developed their first set of true leaves. Microgreens are prized for their intense flavors, vibrant colors, and high nutrient content. They are commonly used as garnishes, salad ingredients, or additions to sandwiches and wraps. Microgreens seeds are specifically selected for their ability to grow quickly and produce tender, flavorful shoots within a short period. They can be grown indoors or outdoors, making them popular among home gardeners and commercial growers alike.

The global Microgreens Seed market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
