Abstracts

The global Micromanipulation Pipettes for IVF market size is predicted to grow from US\$ 37.88 million in 2025 to US\$ 55.37 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Micromanipulation Pipette for IVF is a specialized micromanipulation tool used in assisted reproductive laboratories for intracytoplasmic sperm injection. It is typically manufactured from fine glass capillary tubing with a sharp, beveled or spiked tip and is operated together with a micromanipulator and microinjection system. Its primary function is to aspirate and control a selected and immobilized single sperm under microscopic observation, penetrate the zona pellucida and oolemma of a stabilized oocyte, and release the sperm directly into the ooplasm to complete intracytoplasmic sperm injection. Product design focuses on tip configuration, lumen geometry, taper profile, bending angle, surface finish and manufacturing consistency to provide reliable sperm handling, controlled oocyte penetration and precise cytoplasmic injection while minimizing mechanical damage to the oocyte. ICSI micropipettes are specialized consumables for assisted reproductive micromanipulation and are functionally distinct from holding pipettes, which are used to stabilize the oocyte during the injection procedure.

Key Findings

ICSI accounts for around 73% of fertilization treatments worldwide and remains the dominant assisted fertilization technique

Mainstream international channel prices are approximately US\$18–20 per micropipette, commonly supplied in packs of ten

Spiked designs and inner diameters below 6 µm form the core configuration of mainstream clinical ICSI micropipettes

Fertility clinics and IVF centers constitute the primary downstream users, while hospital reproductive centers provide another major demand base

Market Trends

The Micromanipulation Pipette for IVF market is evolving from basic glass injection tools toward highly standardized microtools optimized for reproducibility, lower oocyte trauma and embryologist-specific handling preferences. Major suppliers increasingly offer multiple combinations of spike design, lumen diameter, taper geometry, bend angle and tip-to-bend distance rather than a single universal specification. Long parallel-wall and slim designs are being developed to improve fluid control and reduce entry diameter, while rigid short-taper designs remain important for users seeking greater puncture stiffness. Large-bore models address surgically retrieved sperm, and flat-tip or dedicated Piezo injection pipettes are expanding the technical range of the market. Manufacturing is also becoming more controlled: CooperSurgical uses automated production and repeated dimensional inspection, while Kitazato and ASTEC emphasize individually inspected precision manufacturing and ICSION offers customized specifications. Cleanroom manufacture, individual sterile packaging, traceability, MEA and endotoxin testing are increasingly becoming core purchasing considerations rather than secondary features.

Market Dynamics

Drivers

Demand is fundamentally supported by the large and recurring global ART treatment base and the high penetration of ICSI within assisted fertilization. ESHRE reports more than three million registered ART cycles annually worldwide and estimates actual activity at around four million cycles after allowing for incomplete registry coverage; ICSI accounts for about 73% of fertilization treatments. Male-factor infertility remains the core clinical foundation for ICSI, while previous poor or failed fertilization and selected use after oocyte cryopreservation provide additional procedure demand. Because ICSI requires direct sperm aspiration and oocyte injection through a precision microtool, each expansion in the number of ICSI-performing embryology laboratories generates recurring demand for sterile single-use injection micropipettes.

Restraints

The market is constrained by the already-high penetration of ICSI, slowing ART growth in some mature markets and the relatively low value of each disposable micropipette. ESHRE notes that ART cycle growth in many developed countries has historically been in the mid- to high-single-digit range but is showing signs of moderation, while CooperSurgical also reported periods of softer fertility activity during 2025. In addition, broader use of ICSI is not automatically supported for every non-male-factor IVF cycle; the 2026 ASRM committee opinion continues to distinguish clearly indicated ICSI from routine use in patients with normal semen parameters. These factors limit the extent to which growth can be generated simply by increasing ICSI penetration, making treatment volume, geographic expansion and supplier share gains more important.

Opportunities

The strongest opportunities lie in geographic expansion, localized manufacturing and increasingly differentiated microtool designs. Major suppliers are expanding distribution into North America, Europe and Asia, while Chinese manufacturers such as VitaVitro, DEWIN and Minvitro have established domestic ICSI injection or micromanipulation product lines, creating additional substitution opportunities in a market historically led by imported microtools. Product-level opportunities are emerging around lower-trauma slim designs, customized dimensions, large-bore pipettes for surgically retrieved sperm and Piezo-compatible injection pipettes. ICSION already supplies dedicated Piezo injection models and CooperSurgical offers flat-tip products for Piezo-ICSI, while DEWIN also includes Piezo tools within its micromanipulation portfolio. Customized production is particularly attractive because embryologists often maintain strong preferences for taper stiffness, fluid response, spike shape and bend geometry.

Challenges

ICSI micropipettes are structurally simple but demanding to manufacture consistently because minute variations in inner diameter, bevel, spike formation, taper length, bend angle or surface defects can materially change handling characteristics during microinjection. Suppliers must therefore combine precision glass processing with cleanroom control, dimensional inspection, sterilization and embryo-compatible biological testing. CooperSurgical performs full visual inspection throughout production and uses gamma sterilization together with MEA and LAL testing, while Labotect uses individually sterile packaging and validated electron-beam sterilization. Another challenge is that embryologist preference is highly operator-specific: flexible long-parallel tapers, rigid short tapers, spiked tips and non-spiked tips can all be preferred in

different laboratories. This limits complete SKU standardization, increases high-mix manufacturing requirements and makes clinical familiarity, training, distributor support and reliable supply important competitive factors alongside price.

Industry Chain Analysis

The upstream chain is centered on high-purity borosilicate glass capillary tubing, polymer holders and protective packaging, precision forming and inspection equipment, cleanroom infrastructure and sterilization services. Midstream production involves capillary cleaning, heating and pulling, taper formation, lumen control, beveling and spike fabrication, bending, polishing, dimensional inspection, cleaning, sterile packaging and biological quality control. CooperSurgical explicitly identifies cleaning, heating and sonication of borosilicate capillaries as part of its process, while VITROMED manufactures injection pipettes from specially cleaned borosilicate glass under cleanroom conditions. Finished products reach users through global direct-sales organizations and specialist IVF distributors, with independent fertility clinics, IVF centers and hospital reproductive medicine laboratories forming the principal clinical customer base and academic or research laboratories representing a smaller specialized segment. The value added is concentrated less in raw glass cost than in precision processing, process reproducibility, quality assurance, regulatory compliance and dependable global distribution.

Segment Insights

By tip configuration, spiked ICSI micropipettes remain the mainstream architecture. CooperSurgical states that most of its ORIGIO ICSI micropipettes use fine spikes, while Vitrolife and Kitazato maintain extensive spiked product ranges; non-spiked products remain relevant for embryologists preferring a sharp bevel without an additional spike. By inner diameter, products below 5.0 μm and those from 5.0 to below 6.0 μm cover the core conventional ICSI range, reflecting the need to balance sperm aspiration, fluid control and a small oocyte entry point. Products at 6.0 μm and above form a more specialized segment, including designs intended to facilitate handling of surgically retrieved sperm or spermatids. By taper design, long parallel-wall products emphasize fine fluid control and flexibility, short parallel-wall products provide a different balance between control and stiffness, and rigid-taper designs serve embryologists who prefer greater tip rigidity during penetration. The continued coexistence of these designs indicates that operator preference and laboratory technique remain important determinants of product selection.

Downstream Market Opportunities

Independent fertility clinics and IVF centers account for the principal commercial demand because ICSI is performed routinely in dedicated embryology laboratories equipped with inverted microscopes, micromanipulators and injection systems. Hospital-based reproductive medicine centers constitute another important customer segment, particularly in markets where ART services are concentrated in university hospitals, maternity hospitals or large medical systems. Academic and research laboratories represent a much smaller but technically important market for micromanipulation research, embryology training and method development. Future downstream opportunities are increasingly associated with large IVF clinic groups seeking standardized consumables across multiple laboratories, expansion of ART capacity in emerging markets, increasing treatment of complex male-factor infertility and greater demand for product traceability and consistent handling performance. Specialized clinical scenarios such as surgically retrieved sperm and Piezo-ICSI also support higher product differentiation even though they remain smaller than conventional ICSI.

Regional Insights

Europe and North America remain major high-value markets for ICSI Micropipettes because of their mature ART infrastructure, extensive clinic networks and established use of regulated single-use laboratory consumables. Europe represents an exceptionally large documented ART base, while the United States combines substantial procedure volume with relatively high consumable pricing. Asia-Pacific provides the largest long-term volume opportunity through major ART markets including China and Japan, although near-term treatment growth can vary significantly by country. ESHRE identifies China at around one million ART cycles annually and Japan as one of the world's most active officially reported ART markets, while Kitazato identifies the United States, Europe, China and other overseas markets as strategic areas for continued expansion. Regional competition is also becoming more localized: European and North American brands retain strong premium positions, while Chinese suppliers are broadening domestic ICSI microtool portfolios and international registrations.

Competitive Landscape Analysis

The competitive landscape combines diversified global ART platforms with highly specialized micropipette manufacturers and increasingly capable regional suppliers. CooperSurgical has one of the strongest manufacturing positions, producing more than

1.5 million ORIGIO micropipettes annually across ICSI and other micromanipulation applications, while Vitrolife and Kitazato combine ICSI microtools with broader IVF consumable portfolios. Nexpring Health has emerged as an important consolidated ART platform incorporating Cook Reproductive Health, Hamilton Thorne, Gynemed, Gyn?tics, IVFtech, Planer and Irvine Scientific. Sunlight Medical, VITROMED, ASTEC, Labotect, Microtech IVF, Synga, ICSION Medical, ARSCI and Optimas compete through specialist microtool know-how, customization and embryologist-oriented designs. Chinese producers including VitaVitro, DEWIN, WEGO Shingene Medical, Lingen Precision Medical Products and Minvitro are strengthening domestic supply and widening the competitive field. Competition therefore centers on dimensional consistency, tip design, biological safety testing, clinical familiarity, specification breadth, distributor reach and reliable supply rather than on price alone.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Micromanipulation Pipettes for IVF Industry Forecast” looks at past sales and reviews total world Micromanipulation Pipettes for IVF sales in 2025, providing a comprehensive analysis by region and market sector of projected Micromanipulation Pipettes for IVF sales for 2026 through 2032. With Micromanipulation Pipettes for IVF sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US\$ millions of the world Micromanipulation Pipettes for IVF industry.

This Insight Report provides a comprehensive analysis of the global Micromanipulation Pipettes for IVF landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Micromanipulation Pipettes for IVF portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Micromanipulation Pipettes for IVF market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Micromanipulation Pipettes for IVF and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Micromanipulation Pipettes for IVF.

This report presents a comprehensive overview, market shares, and growth opportunities of Micromanipulation Pipettes for IVF market by product type, application, key manufacturers and key regions and countries.

Market Segmentation

Segmentation by Type:

Spiked

Non-Spiked

Segmentation by Inner Diameter:

<5.0 ?m

5.0—<6.0 ?m

?6.0 ?m

Segmentation by Taper Design:

Long Parallel-Wall

Short Parallel-Wall

Rigid-Taper

Segmentation by Application:

Fertility Clinics and IVF Centers

Hospital-Based Reproductive Medicine Centers

Academic and Research Laboratories

Others

This report also splits the market by region:

Americas

United States

Canada

Mexico

Brazil

APAC

China

Japan

Korea

Southeast Asia

India

Australia

Europe

Germany

France

UK

Italy

Russia

Middle East & Africa

Egypt

South Africa

Israel

Turkey

GCC Countries

The below companies that are profiled have been selected based on inputs gathered from primary experts and analysing the company's coverage, product portfolio, its market penetration.

CooperSurgical

Nexpring Health

Vitrolife

Kitazato

Sunlight Medical

VITROMED

ASTEC

Labotect

Thomas Medical

Microtech IVF

Synga

ARSCI

Optimas

ICSION Medical

Monash Biotech

Reproline medical

TechBruein

SASOmed

VitaVitro

DEWIN

WEGO Shingene Medical

Lingen Precision Medical Products

Diagens Bio

Minvitro

Key Questions Addressed in this Report

What is the 10-year outlook for the global Micromanipulation Pipettes for IVF market?

What factors are driving Micromanipulation Pipettes for IVF market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do Micromanipulation Pipettes for IVF market opportunities vary by end market size?

How does Micromanipulation Pipettes for IVF break out by Type, by Application?

Contents

1 SCOPE OF THE REPORT

- 1.1 Market Introduction
- 1.2 Years Considered
- 1.3 Research Objectives
- 1.4 Market Research Methodology
- 1.5 Research Process and Data Source
- 1.6 Economic Indicators
- 1.7 Currency Considered
- 1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

- 2.1 World Market Overview
 - 2.1.1 Global Micromanipulation Pipettes for IVF Annual Sales 2021-2032
 - 2.1.2 World Current & Future Analysis for Micromanipulation Pipettes for IVF by Geographic Region, 2021, 2025 & 2032
 - 2.1.3 World Current & Future Analysis for Micromanipulation Pipettes for IVF by Country/Region, 2021, 2025 & 2032
- 2.2 Micromanipulation Pipettes for IVF Segment by Type
 - 2.2.1 Spiked
 - 2.2.2 Non-Spiked
 - 2.2.3 Micromanipulation Pipettes for IVF Sales by Type
 - 2.2.3.1 Global Micromanipulation Pipettes for IVF Sales Market Share by Type (2021-2026)
 - 2.2.3.2 Global Micromanipulation Pipettes for IVF Revenue and Market Share by Type (2021-2026)
 - 2.2.3.3 Global Micromanipulation Pipettes for IVF Sale Price by Type (2021-2026)
- 2.3 Micromanipulation Pipettes for IVF Segment by Inner Diameter
 - 2.3.1 <5.0 ?m
 - 2.3.2 5.0—<6.0 ?m
 - 2.3.3 ?6.0 ?m
 - 2.3.4 Micromanipulation Pipettes for IVF Sales by Inner Diameter
 - 2.3.4.1 Global Micromanipulation Pipettes for IVF Sales Market Share by Inner Diameter (2021-2026)
 - 2.3.4.2 Global Micromanipulation Pipettes for IVF Revenue and Market Share by Inner Diameter (2021-2026)

2.3.4.3 Global Micromanipulation Pipettes for IVF Sale Price by Inner Diameter (2021-2026)

2.4 Micromanipulation Pipettes for IVF Segment by Taper Design

2.4.1 Long Parallel-Wall

2.4.2 Short Parallel-Wall

2.4.3 Rigid-Taper

2.4.4 Micromanipulation Pipettes for IVF Sales by Taper Design

2.4.4.1 Global Micromanipulation Pipettes for IVF Sales Market Share by Taper Design (2021-2026)

2.4.4.2 Global Micromanipulation Pipettes for IVF Revenue and Market Share by Taper Design (2021-2026)

2.4.4.3 Global Micromanipulation Pipettes for IVF Sale Price by Taper Design (2021-2026)

2.5 Micromanipulation Pipettes for IVF Segment by Application

2.5.1 Fertility Clinics and IVF Centers

2.5.2 Hospital-Based Reproductive Medicine Centers

2.5.3 Academic and Research Laboratories

2.5.4 Others

2.5.5 Micromanipulation Pipettes for IVF Sales by Application

2.5.5.1 Global Micromanipulation Pipettes for IVF Sale Market Share by Application (2021-2026)

2.5.5.2 Global Micromanipulation Pipettes for IVF Revenue and Market Share by Application (2021-2026)

2.5.5.3 Global Micromanipulation Pipettes for IVF Sale Price by Application (2021-2026)

3 GLOBAL BY COMPANY

3.1 Global Micromanipulation Pipettes for IVF Breakdown Data by Company

3.1.1 Global Micromanipulation Pipettes for IVF Annual Sales by Company (2021-2026)

3.1.2 Global Micromanipulation Pipettes for IVF Sales Market Share by Company (2021-2026)

3.2 Global Micromanipulation Pipettes for IVF Annual Revenue by Company (2021-2026)

3.2.1 Global Micromanipulation Pipettes for IVF Revenue by Company (2021-2026)

3.2.2 Global Micromanipulation Pipettes for IVF Revenue Market Share by Company (2021-2026)

3.3 Global Micromanipulation Pipettes for IVF Sale Price by Company

3.4 Key Manufacturers Micromanipulation Pipettes for IVF Producing Area Distribution, Sales Area, Product Type

3.4.1 Key Manufacturers Micromanipulation Pipettes for IVF Product Location Distribution

3.4.2 Players Micromanipulation Pipettes for IVF Products Offered

3.5 Market Concentration Rate Analysis

3.5.1 Competition Landscape Analysis

3.5.2 Concentration Ratio (CR3, CR5 and CR10) & (2024-2026)

3.6 New Products and Potential Entrants

3.7 Market M&A Activity & Strategy

4 WORLD HISTORIC REVIEW FOR MICROMANIPULATION PIPETTES FOR IVF BY GEOGRAPHIC REGION

4.1 World Historic Micromanipulation Pipettes for IVF Market Size by Geographic Region (2021-2026)

4.1.1 Global Micromanipulation Pipettes for IVF Annual Sales by Geographic Region (2021-2026)

4.1.2 Global Micromanipulation Pipettes for IVF Annual Revenue by Geographic Region (2021-2026)

4.2 World Historic Micromanipulation Pipettes for IVF Market Size by Country/Region (2021-2026)

4.2.1 Global Micromanipulation Pipettes for IVF Annual Sales by Country/Region (2021-2026)

4.2.2 Global Micromanipulation Pipettes for IVF Annual Revenue by Country/Region (2021-2026)

4.3 Americas Micromanipulation Pipettes for IVF Sales Growth

4.4 APAC Micromanipulation Pipettes for IVF Sales Growth

4.5 Europe Micromanipulation Pipettes for IVF Sales Growth

4.6 Middle East & Africa Micromanipulation Pipettes for IVF Sales Growth

5 AMERICAS

5.1 Americas Micromanipulation Pipettes for IVF Sales by Country

5.1.1 Americas Micromanipulation Pipettes for IVF Sales by Country (2021-2026)

5.1.2 Americas Micromanipulation Pipettes for IVF Revenue by Country (2021-2026)

5.2 Americas Micromanipulation Pipettes for IVF Sales by Type (2021-2026)

5.3 Americas Micromanipulation Pipettes for IVF Sales by Application (2021-2026)

5.4 United States

5.5 Canada

5.6 Mexico

5.7 Brazil

6 APAC

10.1 Raw Material and Suppliers

10.2 Manufacturing Cost Structure Analysis of Micromanipulation Pipettes for IVF

10.3 Manufacturing Process Analysis of Micromanipulation Pipettes for IVF

10.4 Industry Chain Structure of Micromanipulation Pipettes for IVF

11 MARKETING, DISTRIBUTORS AND CUSTOMER

11.1 Sales Channel

11.1.1 Direct Channels

11.1.2 Indirect Channels

11.2 Micromanipulation Pipettes for IVF Distributors

11.3 Micromanipulation Pipettes for IVF Customer

12 WORLD FORECAST REVIEW FOR MICROMANIPULATION PIPETTES FOR IVF BY GEOGRAPHIC REGION

12.1 Global Micromanipulation Pipettes for IVF Market Size Forecast by Region

12.1.1 Global Micromanipulation Pipettes for IVF Forecast by Region (2027-2032)

12.1.2 Global Micromanipulation Pipettes for IVF Annual Revenue Forecast by Region (2027-2032)

12.2 Americas Forecast by Country (2027-2032)

12.3 APAC Forecast by Region (2027-2032)

12.4 Europe Forecast by Country (2027-2032)

12.5 Middle East & Africa Forecast by Country (2027-2032)

12.6 Global Micromanipulation Pipettes for IVF Forecast by Type (2027-2032)

12.7 Global Micromanipulation Pipettes for IVF Forecast by Application (2027-2032)

13 KEY PLAYERS ANALYSIS

13.1 CooperSurgical

13.1.1 CooperSurgical Company Information

13.1.2 CooperSurgical Micromanipulation Pipettes for IVF Product Portfolios and Specifications

13.1.3 CooperSurgical Micromanipulation Pipettes for IVF Sales, Revenue, Price and Gross Margin (2021-2026)

13.1.4 CooperSurgical Main Business Overview

13.1.5 CooperSurgical Latest Developments

13.2 Nexpring Health

13.2.1 Nexpring Health Company Information

13.2.2 Nexpring Health Micromanipulation Pipettes for IVF Product Portfolios and Specifications

13.2.3 Nexpring Health Micromanipulation Pipettes for IVF Sales, Revenue, Price and Gross Margin (2021-2026)

13.2.4 Nexpring Health Main Business Overview

13.2.5 Nexpring Health Latest Developments

13.3 Vitrolife

13.3.1 Vitrolife Company Information

13.3.2 Vitrolife Micromanipulation Pipettes for IVF Product Portfolios and Specifications

13.3.3 Vitrolife Micromanipulation Pipettes for IVF Sales, Revenue, Price and Gross Margin (2021-2026)

13.3.4 Vitrolife Main Business Overview

13.3.5 Vitrolife Latest Developments

13.4 Kitazato

13.4.1 Kitazato Company Information

13.4.2 Kitazato Micromanipulation Pipettes for IVF Product Portfolios and Specifications

13.4.3 Kitazato Micromanipulation Pipettes for IVF Sales, Revenue, Price and Gross Margin (2021-2026)

13.4.4 Kitazato Main Business Overview

13.4.5 Kitazato Latest Developments

13.5 Sunlight Medical

13.5.1 Sunlight Medical Company Information

13.5.2 Sunlight Medical Micromanipulation Pipettes for IVF Product Portfolios and Specifications

13.5.3 Sunlight Medical Micromanipulation Pipettes for IVF Sales, Revenue, Price and Gross Margin (2021-2026)

13.5.4 Sunlight Medical Main Business Overview

13.5.5 Sunlight Medical Latest Developments

13.6 VITROMED

13.6.1 VITROMED Company Information

13.6.2 VITROMED Micromanipulation Pipettes for IVF Product Portfolios and Specifications

13.6.3 VITROMED Micromanipulation Pipettes for IVF Sales, Revenue, Price and Gross Margin (2021-2026)

13.6.4 VITROMED Main Business Overview

13.6.5 VITROMED Latest Developments

13.7 ASTEC

13.7.1 ASTEC Company Information

13.7.2 ASTEC Micromanipulation Pipettes for IVF Product Portfolios and Specifications

13.7.3 ASTEC Micromanipulation Pipettes for IVF Sales, Revenue, Price and Gross Margin (2021-2026)

13.7.4 ASTEC Main Business Overview

13.7.5 ASTEC Latest Developments

13.8 Labotect

13.8.1 Labotect Company Information

13.8.2 Labotect Micromanipulation Pipettes for IVF Product Portfolios and Specifications

13.8.3 Labotect Micromanipulation Pipettes for IVF Sales, Revenue, Price and Gross Margin (2021-2026)

13.8.4 Labotect Main Business Overview

13.8.5 Labotect Latest Developments

13.9 Thomas Medical

13.9.1 Thomas Medical Company Information

13.9.2 Thomas Medical Micromanipulation Pipettes for IVF Product Portfolios and Specifications

13.9.3 Thomas Medical Micromanipulation Pipettes for IVF Sales, Revenue, Price and Gross Margin (2021-2026)

13.9.4 Thomas Medical Main Business Overview

- 13.9.5 Thomas Medical Latest Developments
- 13.10 Microtech IVF
 - 13.10.1 Microtech IVF Company Information
