The global Micrometer Driven Phase Shifters market size is predicted to grow from US\$ 15.07 million in 2025 to US\$ 19.57 million in 2032; it is expected to grow at a CAGR of 3.9% from 2026 to 2032.

A micrometer-driven phase shifter is a device that combines the functions of a micrometer and a phase shifter and is capable of adjusting the phase of a wave. The micrometer is responsible for measuring and providing precise input signals, which are passed through the drive circuit to the phase shifter, which adjusts the phase of the wave based on these signals. This combination enables the system to perform phase adjustment under high-precision requirements, and is suitable for situations where high-precision phase control is required.
