Micromolding is a manufacturing technology used to manufacture and process small, complex-shaped parts or structures at the micron level. This technology is widely used in microelectronics, biomedicine, optics, precision manufacturing and other fields.

Due to the different demands for micro-molding in different application fields, there are also different requirements for the performance and use of the equipment. Micromolding companies need to provide customized services and products to meet the specific needs of their customers. As the market continues to change and the need for personalization increases, the demand for customized services will continue to increase. The application fields of micromolding technology are constantly expanding. In addition to traditional microelectronics, biomedicine and other fields, there are now more application fields being explored, such as micro-robots, micro-sensors, micro-actuators, etc. Developments in these areas will further drive the growth of the micromolding market.
