Microparticulated egg white refers to the process of microneizing proteins to improve their functional properties and nutritional value. Whey protein is widely used in a variety of foods to enhance its functional properties and nutritional value. The discovery of microparticles has created new opportunities for global food processors. Granular whey protein, which ACTS like fat, can be substituted for fat in dairy products such as cheese, desserts, yogurt and ice cream. Microproteins can significantly improve texture and taste in low-fat cheese production. The use of micro-sized proteins could further boost the development of the low-fat dairy industry and reduce the cost of traditional cheese production.
