Microplastic coagulants are chemical coagulants specifically formulated or applied to remove microplastic particles from water and wastewater streams through charge neutralization, adsorption, and sweep flocculation mechanisms. In 2025, global microplastic coagulants production reached approximately 174,933 ton, with an average global market price of around USD 1,200 per ton. A factory gross profit of USD 240 per ton with 20% gross margin. A single line full machine capacity production is around 18,000 ton per line per year. The upstream is dependent on acrylamide, iron salts and chitosan. The downstream demand is concentrated in wastewater, water treatment and microfiber capture. Cationic polyacrylamides used as industrial wastewater treatment due to effective suspended solids and microplastic removal. India market is driven by river restoration initiatives, expanding sewage treatment infrastructure. China and South Korea market is driven by wastewater treatment.
