The global Microporous Membrane Folding Filter Cartridge market size is predicted to grow from US$ 2000 million in 2025 to US$ 2849 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Microporous membrane folding filter cartridge is a highly efficient filter element composed of folded microporous membranes. It is used to separate suspended particles in liquids and gases. It is usually made of microporous membrane materials such as polypropylene (PP), nylon (Nylon), polyether sulfone (PES) or polytetrafluoroethylene (PTFE). Its core is a microporous membrane that has been "folded" to increase the filtration area and combine it with the support layer to form a wrinkle structure, thereby achieving high filtration accuracy, large intake amount, low pressure difference and long life. The filter element is assembled using hot melt welding technology and does not contain glue. It can effectively avoid secondary pollution and is widely used in precision filtration fields such as medicine, food, electronics, and chemicals. In 2024, global Microporous Membrane Folding Filter Cartridge production reached approximately 239 M Units, with an average global market price of around US$ 8136 per K unit.

United States market for Microporous Membrane Folding Filter Cartridge is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
