The very thin and tiny veins that look like a spider web below the skin is known as spider veins or thread veins. Spider vein are also known as small varicose veins. They are caused because of the malfunctioning of the valves in the veins. The bloods gets backed up in the veins resulting into swelling. Microsclerotherapy is one of the best technique to treat spider veins. It involves injecting a substance called as sclerosant, which destroys the veins over a period of time and makes it disappear. The technique is most used on legs and other body parts and rare on face due to the minimal possibility of scarring. Normally the patients require about 2 to 6 session of treatment at 4 to 8 weeks of intervals, also depending upon the size of the veins.
